

Beginning Windows 10

Beginning Windows 10 is a four-hour class, with two hours each on two consecutive days, for people who have been using earlier versions of Windows, but have recently, or are about to, switch to Windows 10.

The class will start with an overview of the Start Menu. The different ways to make it appear and disappear and the different areas within it.

We will show you how to discover all the applications (apps) that are installed on the computer.

The Start Menu has some “tiles” on it that are constantly using the internet. We will show you how to use all the tiles, turn them off, or delete them.

We will discuss files explorer and how to organize your files.

Edge and Bing are the applications in Windows 10 for searching the internet. You can use whichever browser or search engine that you wish, but we will be showing you Edge and Bing because they are a part of Windows 10.

We cannot demonstrate Cortana in the computer lab because Rogue Community College has the feature turned off. We will show you how to search your computer for your lost files and pictures.
