How to Organize Pictures in Google Photos

https://www.pcmag.com/feature/366858/how-to-organize-pictures-in-google-photos

From Wikipedia, the free encyclopedia

Google Photos is a photo sharing and storage service developed by Google. It was announced in May 2015 and spun out from Google+, the company's social network.

Google Photos gives users free, unlimited storage for photos up to 16 megapixels and videos up to 1080p resolution. The service automatically analyzes photos, identifying various visual features and subjects. Users can search for anything in photos, with the service returning results from three major categories: People, Places, and Things. Google Photos recognizes faces, grouping similar ones together (this feature is only available in certain countries due to privacy laws); geographic landmarks (such as the Eiffel Tower); and subject matter, including birthdays, buildings, animals, food, and more.

Different forms of machine learning in the Photos service allow recognition of photo contents, automatically generate albums, animate similar photos into quick videos, surface past memories at significant times, and improve the quality of photos and videos. In May 2017, Google announced several updates to Google Photos, including reminders for and suggested sharing of photos, shared photo libraries between two users, and physical albums, with Photos automatically suggesting collections based on face, location, trip, or other distinction.

Google Photos acts as a back up when photos are sent or in Google terms 'Shared'. This is just a common backup tool when photos are shared between social media or other platforms or apps.

Google Photos received critical acclaim after its decoupling from Google+ in 2015. Reviewers liked the updated Photos service for its recognition technology, search, apps, and loading times. Nevertheless, privacy concerns were raised, including Google's motivation for building the service, as well as its relationship to governments and possible laws requiring Google to hand over a user's entire photo history. Google Photos has seen strong user adoption. It reached 100 million users after five months, 200 million after one year, and 500 million as of May 2017, with Google announcing that over 1.2 billion photos are uploaded to the service every day, with the grand total of all uploaded content measuring over 13.7 petabytes of storage. For comparison, at the end of 2017 the entire Internet Archive held almost 40 petabytes

How to Create an Anonymous Email Account

https://www.pcmag.com/article/331733/how-to-create-an-anonymous-email-account

Sometimes it pays to be not who you really are to prevent the bad guys from getting into your stuff. This site shows how to be anonymous when on the web.

How to Reset Any iPhone or Android Device

Before ditching your old gadget, you'll want to wipe all traces of yourself and your data. Here's how to erase personal data from an iPhone, iPad, or Android device.

You're getting ready to sell or give away your iPhone, iPad, or Android device, but first you want to wipe all traces of yourself and your data. Fortunately, Apple and Android devices offer built-in features through which you can erase all your personal information, applications, and other content. The process brings the phone or tablet back to factory conditions so a new owner can't retrieve any leftover information. The steps for wiping your phone differ between an iPhone or Android phone but are quite doable with either type of device.

Identity Theft: Act Now to Protect Yourself

I recently saw the article above in Kiplinger magazine. It covers a lot of material about different types of theft, freezing your credit reports, two-factor authentication and much more. See the complete article at the Kiplinger.com site below. A list in it about help options is listed below.

https://www.kiplinger.com/article/credit/T048-C000-S002-identity-theft-act-now-to-protect-yourself.html

Where to get help

Tap these resources to protect yourself from ID theft, to get assistance if you do become a victim and to receive alerts about new scams.

- The nonprofit Identity Theft Resource Center helps victims resolve identity theft. Call the ITRC at 888-400-5530, or start a live chat online at **idtheftcenter.org**.
- The AARP Fraud Watch Network hotline (877-908-3360) offers victim assistance, and you don't have to be an AARP member to use it.
- The Federal Trade Commission's **IdentityTheft.gov** walks victims through the steps to recovery depending on the type of fraud they experienced and offers sample letters to send to credit agencies, lenders and other involved parties. **FraudSupport.org** also guides victims to resources.
- For detailed instructions on how to place a credit freeze, including web links and phone numbers for the credit agencies, see **Freeze Your Credit in Three Steps**.
- To stay up-to-date on the latest scams, you can sign up for alerts at **fraud.org**, **consumer.ftc.gov/features/scam-alerts** and **aarp.org/money/scams-fraud**.
- To see if any of your e-mail addresses or accounts have turned up in a data breach, go to **HaveIBeenPwned.com**. If you turn up a positive result, it's time to update your passwords.
- If a suspicious e-mail shows up in your inbox, use Google's Safe Browsing URL checker to see if a website has been reported as dangerous to visit. This can include malware-laden cesspools as well as legit sites that have been compromised. See more at **transparencyreport.google.com**.

Sony Cameras Can Now Focus on Your Pet's Eyes

https://www.pcmag.com/news/367932/sony-cameras-can-now-focus-on-your-pets-eyes

Eye detection for animals is good news for anyone who likes to photograph their pets, and Sony isn't stopping there. It plans on adding support for more animals via future updates, and will also be bringing the feature to its a6400 and a9 cameras later this summer.

This is kind of scary because it shows how much can be recognized by the camera. Watch the video and see how quickly it finds the various pet's eyes. This is a consumer camera, not some special government agency's. You know they have smarter goodies. See below.

For even more '**Big Brother**' stuff see this info on the web.

Flying Out of a US Airport? Your Face Will Be Scanned

https://www.pcmag.com/news/367896/departing-a-us-airport-your-face-will-be-scanned

US customs intends to have 97 percent of departing passengers scanned with facial recognition tech within four years as a way of cracking down on visa overstays.

Strange Term Definitions

Artificial Intelligence

The capability of a machine to imitate intelligent human behavior

Really is supplemental intelligence. Computer/program does thinking faster than Human. Relies on human created program to get results.

Augmented Reality

An enhanced version of reality created by the use of technology to overlay digital information on an image of something being viewed through a device (such as a smartphone camera).

Cloud Computing

The practice of using a network of remote servers hosted on the Internet to store, manage, and process data, rather than a local server or a personal computer.

The practice of storing regularly used computer data/programs on multiple servers that can be accessed through the Internet. Accessible from anywhere.

Email

Banking

Office 365

******* DON'T CLICK *******

Computer Virus

A **computer virus** is a type of malicious software that, when executed, replicates itself by modifying other computer programs and inserting its own code. When this replication succeeds, the affected areas are then said to be "infected" with a computer virus. Computer viruses currently cause billions of

dollars' worth of economic damage each year, due to causing system failure, wasting computer resources, corrupting data, increasing maintenance costs, etc.

Computer Malware - **mal**icious soft**ware**

Malware is any software intentionally designed to cause damage to a computer, server, client, or computer network. ... The code is described as computer viruses, worms, Trojan horses, ransomware, spyware, adware, and scareware, among other terms.

RansomWare

Ransomware is a type of malware that prevents or limits users from accessing their system, either by locking the system's screen or by locking the users' files unless a ransom is paid.

K[eyloggers](#)

A computer program that records every keystroke made by a computer user, especially in order to gain fraudulent access to passwords and other confidential information.

Trojan horse

A Trojan horse or Trojan is a type of malware that is often disguised as legitimate software. Trojans can be employed by cyber-thieves and hackers trying to gain access to users' systems. Users are typically tricked by some form of social engineering into loading and executing Trojans on their systems. Once activated, Trojans can enable cyber-criminals to spy on you, steal your sensitive data, and gain backdoor access to your system.

Adware

Adware is designed to display advertisements on your computer and redirect your search requests to advertising websites to collect marketing data about you.

Spyware

Spyware is something of a grey area, as there's really no copy-book *definition* of it. As its name suggests, however, *spyware* is generally loosely *defined* as software that's designed to gather data from a computer or other device and forward it to a third party without the consent or knowledge of the user.

VPN - Virtual Private Network

There has been a lot of articles suggesting we use a VPN for protection, but now there is a bad guy called VPNFilter that is attacking routers from several manufacturers. The malicious code has attacked more than 70 router models. And it is not easy to get rid of. See links below about this bud and the reasons to use a VPN. This threat is another reason to keep all of your system components software updated frequently. The vendors try to stop the bad guys ASAP with new software update when they figure out the way they 'get in'. Some of the updating gets a little techie but fellow RASCALs are ready to help. We may need a meeting presentation on this subject in the near future.

How a VPN Review Site Dominates Google Search With a Scam

Identity can be a tricky thing on the Internet. A Google search will turn up public figures pretty easily, but for lesser-known figures, I use LinkedIn as a vetting tool. Who would fake a LinkedIn account? Turns out, someone who wants to present himself as an expert in order to collect links from well-established sites like PCMag. Our West Coast reporter Michael Kan recently went down the internet rabbit hole trying to find out who the founder of TheBestVPN.com (a site that purports to dispense honest VPN and privacy advice) really is. Read our story to get the full scoop on 'John Mason' and how this not-legit site manages to dominate search rankings. Meanwhile, if you are looking for the best VPN, PCMag has been reviewing security and privacy apps since 1982. Our real-life expert Max Eddy, has tested scores of VPNs.

Websites For Technical Information

https://www.pcworld.com/ (one of my favorites - daily info broadcast)

https://www.pcworld.com/ (one of my favorites – daily info broadcast)

https://www.grafdom.com/blog/top-20-best-tech-websites-and-blogs/ (No info listed – go to this address for more site information – could not copy)

https://blog.toggl.com/best-tech-websites/ (Site info starts on page 4)

https://www.bloggersideas.com/best-tech-news-websites/ (Site info starts on page 7)

https://www.lifehack.org/articles/technology/10-must-read-tech-sites-stay-updated.html (Sites listed immediately below)

Are you looking for the most credible voices in technology news? The rise of online publications and blogs has resulted in a flood of information regarding computers, mobile gadgets, software and operating systems. It can be difficult, however, to know which websites you can trust. Here are some of the most trusted websites; these will help you keep up with the constant flow of technological updates.

1. Arstechnica.com

First on the list is Ars Technica, simply because of the date of inception. This site has been around for nearly two decades, a very substantial amount of time. The publication, now owned by Conde Nast, is a go-to for both tech professionals and hobbyists. Ars Technica features a wide range of news and editorials, delving into business, legal ramifications, security, and other consumer interests.

The dialogue isn't a one-way street, either. Readers can interact with one another by checking out the Ars Technica forums, which allow for discussions on hardware modifications, operations systems, software and gaming. Ars Technica's operations are funded primarily by online advertising and it has been a paid subscription service since 2001.

Interestingly, the website generated much controversy in 2009 when they prevented users who had installed advertisement blocking software from viewing the site. While this stirred some negative reactions, the site continues to be a trusted resource today.

2. Techcrunch.com

Second on the list is TechCrunch, thanks to the website's more than 50,000 active contributors. If you want to get the scoop on technology startups, then TechCrunch is the news source for you. This publication highlights the business side of tech innovation, covering major acquisitions, funding sources, and product launches. You can browse news based on brand

names, such as Google, Apple, or Twitter. You can also sift through news and reviews by tuning into different category channels like Enterprise, Startups, or Mobile.

One of the most compelling sections of Tech Crunch is Crunch Base, a vast database of technology companies and startups. Each Crunch Base profile includes financial details for each company, including funding received, headquarters locations, and the names of the founders.

In 2011, the company was accused of ethical violations and the founder, Michael Arrington, left the company. Fortunately, the company was able to bounce back, and still provides great technological updates for consumers.

3. Engadget.com

Engadget makes number three on our list, because it's a great multilingual resource. Impressively, this resource has been helping people make informed tech purchasing decisions since 2004. It's no surprise that the collection of blogs on Engadget have had such success, since it was created by a co-founder of Gizmodo, Peter Rojas.

Interestingly, the editorial team involved in steering Engadget to fame has moved on to pursue several other successful endeavors. For example, former Engadget editor-in-chief, Joshua Topolsky, went on to create The Verge, followed by an editorial role at Bloomberg.

4. Thenextweb.com

The Next Web makes the next spot on our list, because of their more than 6.5 million unique monthly visitors. This site is constantly looking at the newest gadgets, web app updates, and service features. Get the head start you need on the latest tech updates, and if you are looking to make a new gadget purchase, check out The Next Web first. They will let you know if something better is coming out shortly!

Unlike many other tech websites, The Next Web has been able to avoid controversy and continues to thrive drama-free today.

5. Wired.com

We love this website because it came from a popular magazine! Coming in at number five on our list, this website split from Wired Magazine in 1990, when it was purchased by Conde Nast Publishing.

This publication deals with the popular culture surrounding technology. If you're looking for an engaging, yet casual read, this website is for you. Wired features entertainment, opinion, business, and security news regarding electronics of all kinds. Furthermore, if you're interested in an old-school paper and ink experience, you can still buy a copy of Wired magazine on newsstands.

6. Tomshardware.com

Tom's Hardware makes the next spot on our list of trustworthy websites, because it's been around since 1996. If you're looking for a site that can help with projects, then check this one out. Tom's Hardware features a unique "build your own" section, where you can learn how to build your own computer.

Anyone who's replaced a computer part or built a PC will tell you how difficult it is to track reviews, part upgrades, and the latest sales. Furthermore, seasoned hardware tinkerers are faced with a dizzying array of components to choose from.

Fortunately, Tom's Hardware helps you cut through the noise and get sound advice on computer parts, from tower cases to motherboards. As stated above, this is the ultimate resource if you're thinking about building a computer, particularly for gaming.

7. Cnet.com

Next on the list is CNET, because we like their region-specific and language-specific editions. Early consumers loved CNET because of their enormous library of freeware and software reviews, available through the CNET download section.

This publication has been around since 1994, and owned by The CBS Corporation since 2008. Reviews make up the majority of content on CNET, helping consumers choose the best hardware, software, and tech services.

Remember Limewire? CNET has been accused of having a part in the controversial music sharing program, but a lawsuit from 2011 has yet to go anywhere.

8. 9to5Mac.com

Number eight on the list is 9 to 5 Mac, solely because it was founded only seven short years ago. The website is very impressive, however, and covers more than just Apple products. They provide information on thousands of accessories that are compatible with the Mac OS X and iOS platforms.

This platform is considered one of the most reliable sources for Apple-relevant news, and it's founding team has been in featured in Business Insider.

9. Gizmodo.com

Coming in towards the end of our list because it was founded just a little over a decade ago, Gizmodo is a prime example of how powerful crowd sourced information and blogging can be. This publication is part of the Gawker Media network, a family of blogs that includes Lifehacker, Deadspin, and Jezebel.

These blogs are all powered by Kinja, which enables any user, including readers, to contribute to the discussion with their very own blog posts. This blurs the line between bloggers and readers, encouraging more people to contribute their voices to the news feed.

10. NewYorkTimes.com

Lastly, we have Bits: The Business of Technology from the New York Times. This newspaper is a leading resource for various information; so it's no surprise that this long-standing publication has created a blog dedicated to technology!

Bits gathers information from every corner of the Internet, and NY Times writers weigh in on new product launches, tech conventions, and upcoming gadget developments. With so many active contributors, and such an impressive host, it's no wonder why Bits needed to make our list of the top tech websites.

https://blog.toggl.com/best-tech-websites/

Tech News and Industry Happenings

Want to know about that recent app update or what's happening in terms of tech legislation? These sites are all about keeping you current with the news in the tech industry.

1. Digital Trends

Where to Find it: https://www.digitaltrends.com/

What They Share: Digital Trends is packed full with all sorts of information. But, the standout sections of this website are undoubtedly the product reviews (from headphones to cameras and everything in between) and their section covering tech news in a wide array of different categories. The site prides itself on being welcoming and approachable—meaning it's a great resource for tech experts and novices alike.

2. Mashable

Where to Find it: https://mashable.com/

What They Share: Mashable isn't only dedicated to tech. The site covers other topics, including entertainment, culture, science, business, and more. However, the tech section is definitely worth a look. This section always has content rolling in, meaning you'll always be in-the-know about the most recent happenings in the tech world.

3. TechCrunch

Where to Find it: https://techcrunch.com/

What They Share: TechCrunch is a well-known player in the tech industry, and the site delivers all sorts of startup and technology-related news—including announcements of startup funding. TechCrunch also frequently hosts tech events in various parts of the globe.

4. Term Sheet

Where to Find it: http://fortune.com/tag/term-sheet/

What They Share: Run and managed by Fortune, Term Sheet provides a daily breakdown of things like venture capital deals, fundraising, IPOs, and other announcements within the industry. If you're interested in the business and finance side of tech, this site is sure to become your next addiction.

5. The Information

Where to Find it: https://www.theinformation.com/

What They Share: If you want to roll up your sleeves and really dig deep into various tech topics, The Information is the place for you. This site features long-form content that takes a thorough look at a wide variety of announcements and happenings within the tech industry. It's not light reading, but you're bound to walk away way more informed than when you started!

6. The Next Web

Where to Find it: https://thenextweb.com/

What They Share: Chances are, you've heard of The Next Web. The founders originally launched the site as a way of promoting the tech event that they were hosting. From there, The Next Web quickly grew into what exists today—a hub for all sorts of technology news, conferences and events, deals, and even a market intelligence platform.

7. TheVerge

Where to Find it: https://www.theverge.com/

What They Share: Alright, The Verge covers a lot more than just tech—there are sections for everything from cars to culture. However, the tech section is where you'll want to spend the majority of your time. The Verge even splits their tech topics into various categories. So, depending on whether you're an Apple person or a Microsoft person or you'd rather look at content specifically related to Google, you're sure to find exactly what you're searching for (without tearing your hair out).

8. VentureBeat

Where to Find it: https://venturebeat.com/

What They Share: Focused specifically on tech news, VentureBeat has all of the information that entrepreneurs, executives, and technology enthusiasts need to get informed, stay in the loop, and make better decisions related to technology.

9. Wired

Where to Find it: https://www.wired.com/

What They Share: Wired is another household name in the tech industry. Of course, you'll find plenty of tech news, as well as a focus on how those emerging technologies impact other areas of our lives. The site is well-organized, with different sections for things like business, gear, security, transportation, and more.

Gadgets and DevicesAre you a gadget-lover? Do you always have your eyes peeled for the next great tech device that you just have to have? These sites will help you discover what's new and awesome in the tech world.

10. Engadget

Where to Find it: https://www.engadget.com/

What They Share: Make no mistake, you'll find plenty of tech news on Engadget. But, you'll really want to turn your attention to the "Reviews" section of the site. There, you'll find in-depth reviews and opinions on all sorts of devices—from wearable baby monitors to phones.

11. Gadget Review

Where to Find it: http://www.gadgetreview.com/

What They Share: On Gadget Review, you'll find all sorts of—you guessed it—expert reviews on various products, software, and tech services. The site's team of experts is constantly searching for new gadgets and devices to put to the test—so you don't have to do so yourself. You can even use their contact form to suggest a gadget you'd like them to review!

12. Gadgets to Use

Where to Find it: https://gadgetstouse.com/

What They Share: Much like other sites, Gadgets to Use is a hub for all things tech-related—including features, editorials, and interviews with industry experts. However, there's a heavy emphasis on gadgets (of course). One spot you'll want to check out? The site's "Comparisons" page where they match up similar devices for a showdown to determine which one reigns supreme.

13. Gizmodo

Where to Find it: https://gizmodo.com/

What They Share: There's no shortage of tech content on Gizmodo—it's definitely not only about gadgets. But, the "Review" section of the site offers opinions, information, and comparisons on a wide array of different gadgets. From phones and tablets to wearables and toys, you're sure to walk away with an honest opinion of whether or not a certain device is worth the hype (and your money!).

14. The Gadgeteer

Where to Find it: https://the-gadgeteer.com/

What They Share: Ever since 1997, The Gadgeteer has been providing tech enthusiasts with gadget-related news and reviews. The reviews you'll find on the site run the gamut—from kneeling desks to wireless earbuds.

15. TheGadgetFlow

Where to Find it: https://thegadgetflow.com/

What They Share: Gadget Flow bills itself as the number one resource to discover the very best products on the market. While we're hesitant to pick a favorite, we won't deny that this site boasts all sorts of information about cool devices and gadgets, and even awesome crowdfunding projects that are well worth your consideration.

16. Ubergizmo

Where to Find it: http://www.ubergizmo.com/

What They Share: Another site that's all about gadgets, you'll find all sorts of opinionated news and reviews about some of the newest devices and products on the market. While the reviews take center stage, there are also plenty of helpful tutorials that can help you make the most of the gadgets that you choose to invest in.

How-To's and Tutorials

Technology can feel intimidating. Fortunately, these sites break it all down in a way that's easy to digest with helpful how-to articles, in-depth guides, and step-by-step tutorials.

Balanced with plenty of industry news and other informative content, these sites really shine with their ability to inform and educate.

17. MakeUseOf

Where to Find it: https://www.makeuseof.com/

What They Share: MakeUseOf is all about simplifying the otherwise overwhelming world of technology. In fact, the site describes itself as your guide in modern tech. If you really want to dig into the good stuff, make sure to check out the site's section with free ebooks to teach you everything from how to choose the best router to how to use Snapchat effectively.

18. TechnologyGuide

Where to Find it: http://www.technologyguide.com/

What They Share: With an entire section titled "How To," TechnologyGuide is a totally comprehensive resource for all of your technology-related confusion and curiosity. Visit that section, and you'll be able to peruse informative articles categorized by interest—from smartphones to software.

19. TechRadar

Where to Find it: https://www.techradar.com/

What They Share: Touted as the source for tech-buying advice, you'll find plenty of news and reviews on TechRadar. But, this site also includes a detailed "How To" section that dishes out plenty of awesome tips and tricks to help you get more from your various tech and gadgets.

https://www.bloggersideas.com/best-tech-news-websites/

Here is list Latest Top 10 Best Tech News Websites and Blogs April 2019: Updated

1. Techcrunch.com:

The website caters to the tech enthusiasts. It provides all the information related to new technology and new gadgets. It also reviews new internet portals and products. It provides the information on latest apps as well, like WhatsApp, etc. The services, events and products launched by various Giants in the market like Dell, Microsoft, Apple, etc. are covered extensively.
