

Intermediate Windows 10

Intermediate Windows 10 is a four-hour class, with two hours each on two consecutive days, for people who are comfortable with what is discussed in Basic Computer Skills and Beginning Windows 10.

We will spend most of the class discussing Settings that customize System, attached devices, Internet, Display, installed applications, Accounts, Clock, Accessibility, Privacy and Security.

The Control Panel has been improved upon to make customizing your computer easier.

There are now 13 sections within the settings, but we will not be discussing the gaming or Cortana settings.
